TP LARGE-KIT DATA SHEET

Mounting Instructions

The TP-Large-Kit is supplied with the following hardware to mount tamper switches and TPS power module.

The TPS power module is mounted with 4 x M4 Pan Phillips screws and external tooth shake proof washers, Tamper switches with 4 x #4x5/8 self cutting Phillips screws, Strain relief 1 x black cable clamp for mains lead and White / black 450mm battery leads fitted with ring connectors.

Mounting the TPS power module

One M4 shakeproof washers MUST be located under each M4 x 6mm screws and are tightented down to ensure a proper earth bond is made between the TPS power module and the battery enclousure.

Final Checks

Test the earth bond with a multimeter between the earth pins of the mains lead connected to the TPS power module and the M4 x 6mm mounted screws. Zero ohms should be read on the meter. If not retighten screws

Mounting the tamper switches

Mount tamper switches before mounting wall mounting the cabinet.
Each tamper switches is mounted with 2 x #4 x 5/8 screws
Tamper switch 1 top switch is fitted with a small hump.
Tamper switch 2 bottom switch is fitted with longer bar. Dependant on the mounting surface a small kink may be required to be made in the switch bar to ensure correct operation of the switch when mounted against a wall.

Strain Relief

Install the black cable clamp on the base of the enclosure where the mains leads exits and clamp down the pliers or clamp tool and insert the cable clamp into the mounting hole.
